

Professional rework of your PFISTER® feeder wear parts

In a rough environment like cement production, no one can prevent wear. This especially applies for the wear parts of your dosing systems like rotor wheels and sealing plates. In order to make sure your systems keep on working at high performance, rotors and sealing plates have to be reworked from time to time.

Our recommendation:

- Re-machining of all 4 sides which are in contact with material at the same time.
- Re-machining not after a fix period of operating hours, but on the occurrence of significant wear.

We mind all machining tolerances!

Key benefits

- Guarantee to keep even the closest tolerances
- Quick response: rework within 6 weeks
- Quality insurance: rework certificate including actual measuring values
- Certified workshop: Hologram identification tag
- Quality rework according to ISO 9001

Focus on TCO

Keep your wear parts in operation up to 9 years with our professional rework. Rotor wheels and sealing plates can be machined up to 3 times every 2-3 years

Our special offer for all PFISTER DRW coal feeders includes:

Parts: upper sealing plate, lower sealing plate, rotor wheel
Discounts on rework of complete sets
